

# Identifying red flags for corruption measurement in Poland

Mihály Fazekas\* - István János Tóth\*\*

\*University of Cambridge and Corruption Research Center Budapest, [mihaly.fazekas@crcb.eu](mailto:mihaly.fazekas@crcb.eu)

\*\*Hungarian Academy of Sciences and Corruption Research Center Budapest

Stefan Batory Foundation, high-level workshop, 7 July 2015, Warsaw,  
Poland

2015.07.09.

# Overview

- Introduction
  - Measurement approach
  - Definition of corruption
- Preliminary Polish results
  - Data overview
  - Individual red flags
  - Preliminary findings
- Further work, discussion

# Starting point

- Available indicators are either biased or too idiosyncratic
    - Perception-based survey instruments measure PERCEPTIONS
    - Experience-based survey instruments suffer from conformity bias and lack of access
    - Audits and case studies lack scope and representativeness
- Need for new indicators

# The CRCB measurement approach

- New approach to corruption in PP
  - harnessing BIG DATA,
  - built on thorough understanding of context, and
  - ,open-ended’
- Indicator characteristics:
  - Specific
  - Real-time
  - ‘Objective’/hard
  - Micro-level
  - Aggregatable + comparative

# Why public procurement?

1. A lot of money involved
2. Crucial role in development (e.g. capital accumulation)
3. Indicates the broader quality of institutions

# Why public procurement?

## 4. Very corrupt

# Practical definition

**In public procurement, the aim of corruption is to steer the contract to the favored bidder without detection.** This is done in a number of ways, including:

- ***Avoiding competition*** through, e.g., unjustified sole sourcing or direct contracting awards.
- ***Favoring a certain bidder*** by tailoring specifications, sharing inside information, *etc.*

See: World Bank Integrity Presidency (2009) Fraud and Corruption. Awareness Handbook, World Bank, Washington DC. pp. 7.

# Theoretical definition

- Specific definition (just like measurement)
- Institutionalised grand corruption in public procurement

*institutionalised grand corruption in public procurement refers to the regular particularistic allocation and performance of public procurement contracts by bending universalistic rules and principles of good public procurement in order to benefit a group of individuals while denying access to all others.*

# FULL data template

- Public procurement data
- Company financial and registry data
- Company ownership and management data
- Political officeholder data
- Treasury accounts of public organisations
- Arbitration court judgements

# DIGIWHIST

- Goals
  - Advancing anticorruption, transparency, and spending efficiency in public procurement
  - Open data and indicators for 35 European countries: EU, EEA, Caucasus
  - Helping audit bodies fighting corruption, fraud, and collusion
- Scope
  - March 2015 – February 2018
  - Consortium: Cambridge, Hertie, CRCB, Datlab, Open Knowledge Foundation, Transcrime

# DIGIWHIST: key outputs

- Data:
  - Transparency and procurement legislation
  - Micro-level procurement data
  - Company information
  - Public organisation information
  - Asset declarations
- Indicators:
  - Corruption
  - Transparency
  - Administrative quality
- Utilization
  - Risk assessment software for public servants
  - Web portals, mobile apps
  - Whistleblower reporting

# Polish PP data

## 1. Tenders Electronic Daily (TED): EU PP Directive

- Above 130K/4M EUR

## 1. National PP database: national PP law

- Below 130K/4M EUR
- Above 14K EUR

# Blueprint for measuring institutionalised grand corruption in PP

1. Corruption Risk Index (CRI): generation and allocation of rents
2. Political Influence Indicator (PII): political influence on companies' market success
3. Supplier Risk Index (SRI): award to risky businesses
4. Political Control Indicator (PCI): direct political control of contractors

# Corruption Risk Index (CRI)

- Probability of institutionalised grand corruption to occur

$$0 \leq CRI^t \leq 1$$

where 0=minimal corruption risk; 1=maximal observed corruption risk

- Composite indicator of elementary risk (CI) indicators

$$CRI^t = \sum_j w_j * CI_j^t$$

- Tailored to country context: Poland

# CRI construction

## 1. Wide set of potential components

- 30 red flags from Fazekas et al, 2013 (HU+)
- 19 red flags from JBF (PL)
- 10 red flags from zIndex (CZ)
- Challenge: capturing  
needs assessment→implementation

# Indicators tested so far

1. Single bidder contract
2. Call for tenders not published in official journal
3. Procedure type
4. Length of eligibility criteria
5. Number of certificates requested
6. Call for tenders modification
7. Length advertisement period
8. Weight of non-price evaluation criteria
9. Length of decision period

More will be tested!

# CRI construction

1. Wide set of potential components
2. Narrowing down the list to the relevant components: 7 CIs
  - Checking whether CI fits corruption logic
  - Set of regressions on single bidder (and winner contract share:work in progress)

# Regression setup

- Outcome variables
  - Single bidder (binary logistic regression)
- Explanatory variables:
  - Elementary corruption indicators
- Control variables:
  - Contract size, length
  - Type of market
  - Year
  - Authority type, sector, and status

# CRI construction

1. Wide set of potential components
2. Narrowing down the list to the relevant components
3. CRI calculation: determining weights
  - Stronger predictor → higher weight
  - Norming to 0-1 band

# Components of PL-CRI

1. **Single bidder contract**
2. Call for tenders not published in official journal (TED only)
3. Procedure type
4. Length of eligibility criteria (national PP only)
5. Length advertisement period
6. Weight of non-price evaluation criteria
7. Length of decision period

# Single bidding: TED vs national PP

No sign of change over time

# Single bidding in EU context (TED)

- Worse performance across the EU...  
... by a large margin

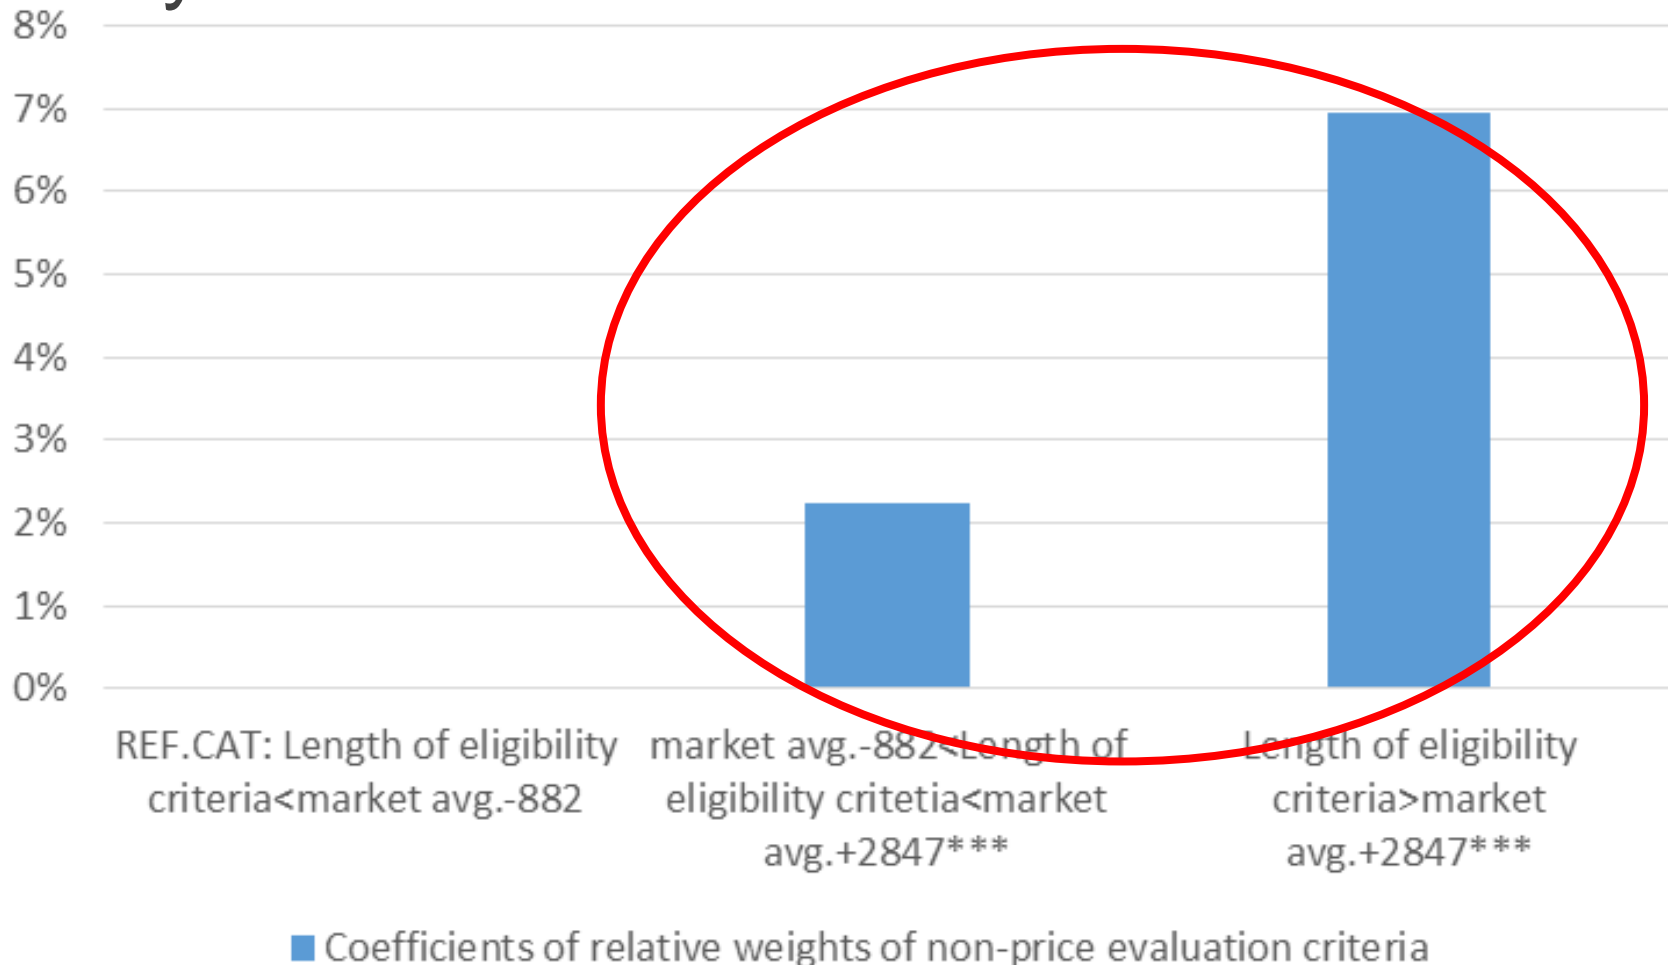

# Procedure type: national PP

- Single bidder share

ca_procedure	mean	N
Free order	99%	12,126
Competitive Dialogue	49%	98
Negotiated_w_pub	47%	292
Negotiated_wo_pub	44%	104
Restricted	36%	1,430
Open	36%	426,848
Electronic Auction	11%	567
Total	37%	441,465

# Eligibility criteria: national PP

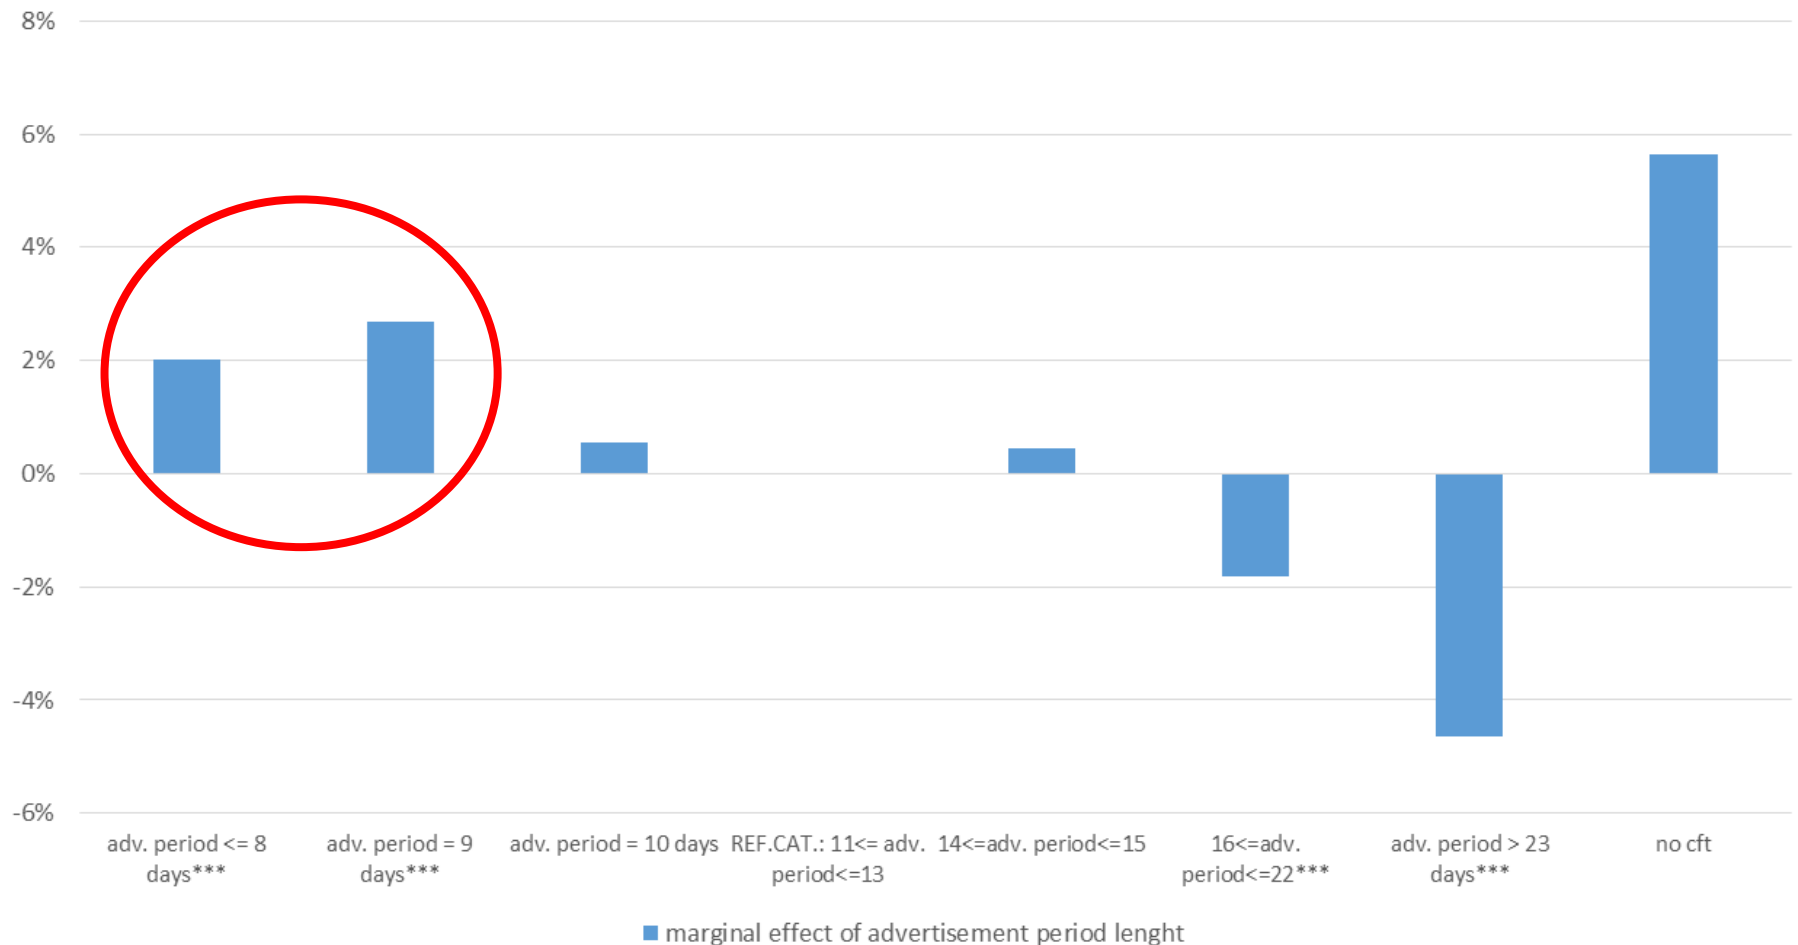

Only shortest criteria are of no risk

# Advertisement period: national PP

Less than 8/9 days is the key risk domain

# Decision period: national PP

Less than 7/11/17 days and missing are risky

# CRI distribution: national PP

Contracting authorities, 2011

2015.07.09.

# Macro validity

- CRI correlates with subjective indicators of corruption
- TI-CPI (2013) vs CRI (2009-2013, TED)

# Micro validity 1.

- Corruption proxies relate to external variables as expected: **rent extraction** from PP contracts
- Relative contract value + CRI in PL, 2009-2014

	TED PL		national PP	
dependent variable	relative contract price (contract price/estimated price)			
independent variable				
single bidder contract	0.092		0.136	
CRI		0.215		0.211
sign.	0.000	0.000	0.000	0.000
each regression contains constant				
controls: sector of the contracting entity, type of contracting entity, year of contract award, country of contract award, main product market of procured goods and services, and contract value				
N	356,840	356,840	386,311	203,029
R2	0.061	0.045	0.114	0.106

# Micro validity 2.

- Corruption proxies relate to external variables as expected: **money laundering, diversion of funds**
- Financial Secrecy Index + CRI in PL (TED), 2009-2014

# Limitations

- Data, data, data!
- You get what you measure: no general indicator of corruption!
- Only lower bound estimate: **sophisticated actors can avoid detection**
- Reflexivity
- Considering complex strategies for limiting competition: e.g. cartels

# Potential applications

1. **Identifying risky areas:** across time, sectors, regions, public bodies
2. **Evaluating large funding programmes:** e.g. EU structural funds
3. **Evaluating regulatory instruments:** EU PP Directive vs Polish PP law
4. **Risk-based audit:** contracts, contracting bodies, suppliers
5. **Supporting public to hold government accountable:** Information website

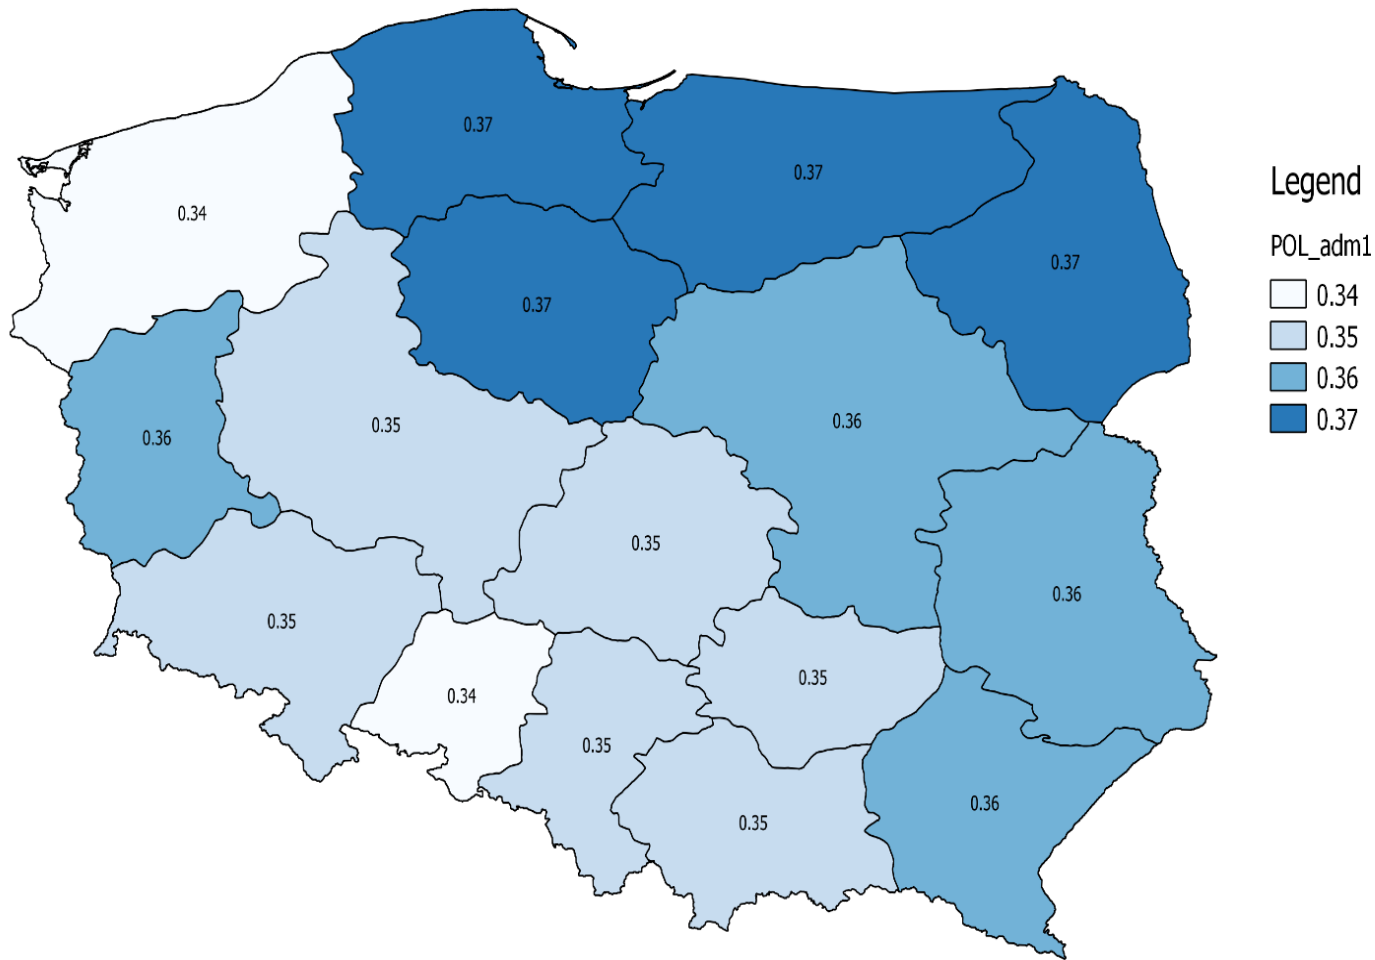

# Sectoral differences: national PP

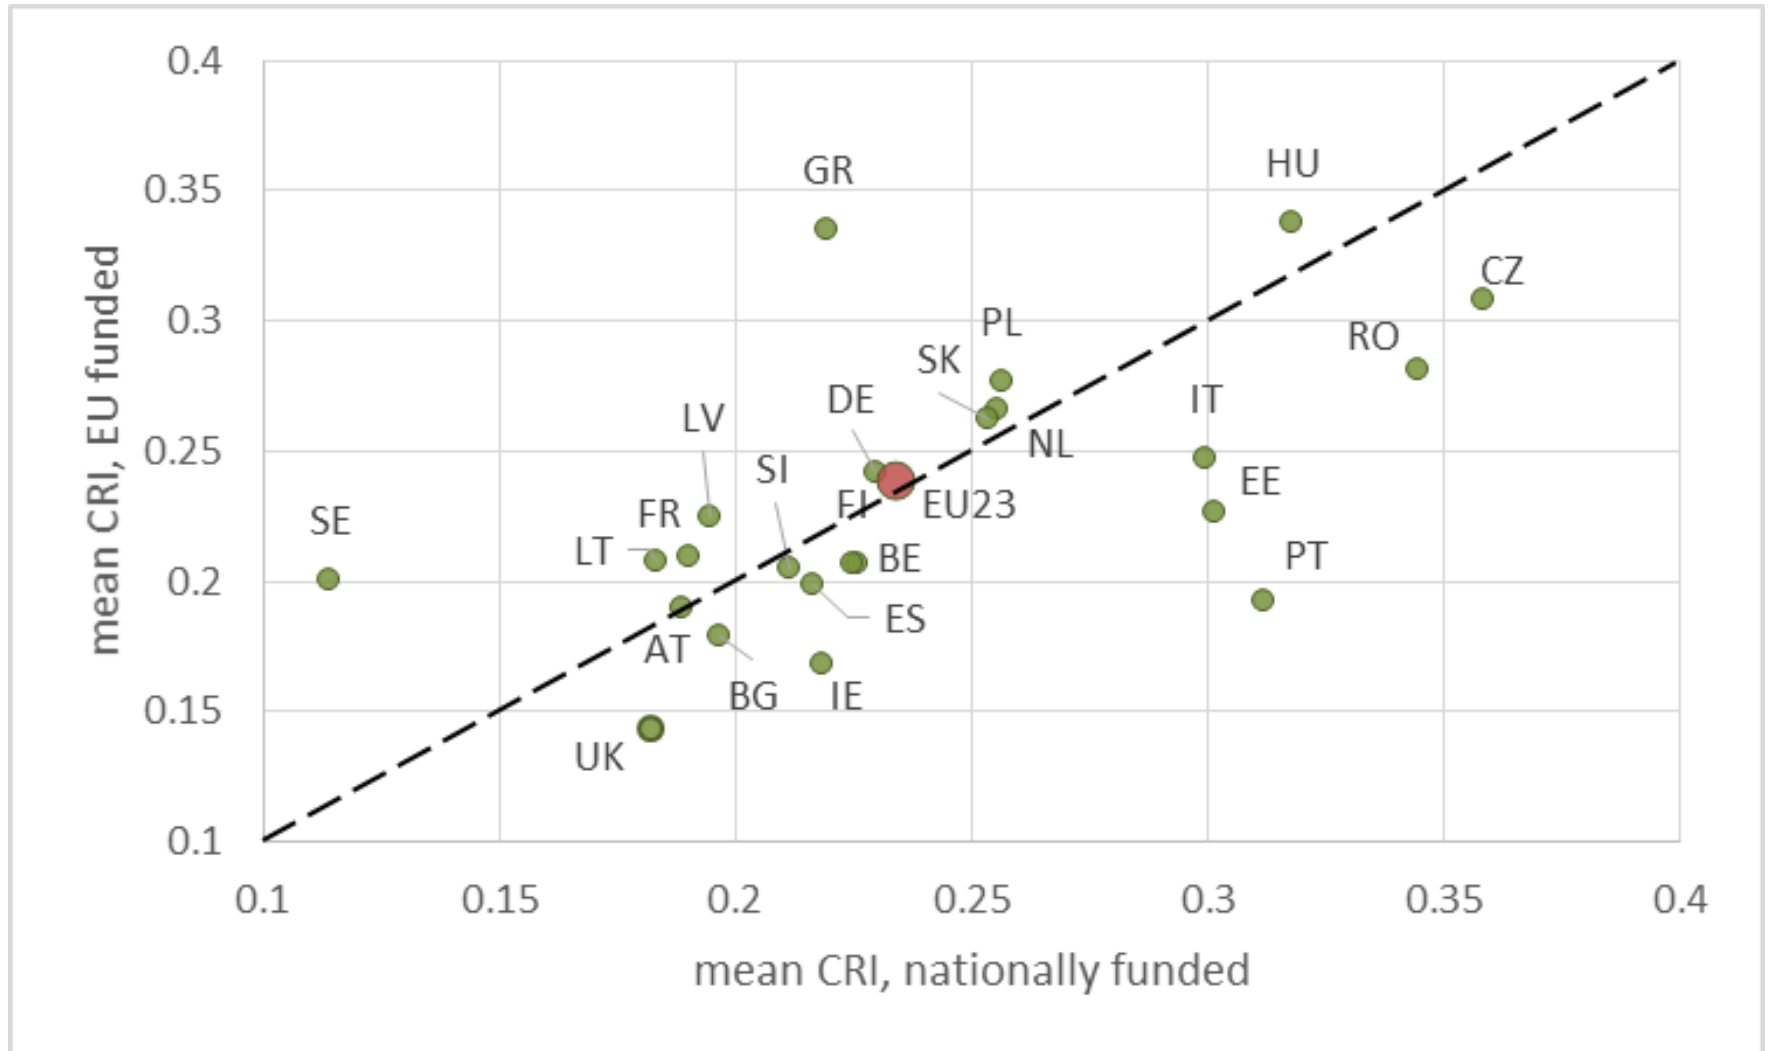

2015.07.09.

# Regional differences: national PP

# Relative corruption of EU funded contracts

- EU23, 2009-2014, TED
- CRI in EU funded and non-EU funded procurement

# TED vs national procurement

TED appears to carry higher risks than national PP  
*effect of higher contract value?*

# Discussion points

- Additional red flags?
- How to use the data and indicators in policy making&monitoring?

# Network data set-up

- Co-bidding network
  - Construction work for pipelines, communication and power lines, for highways, roads, airfields and railways
  - 3 regional and 1 national markets in 2007&2009
- Nods: bidding firms (winners and losers)
  - size=number of tenders won
  - colour=network position (green=cut-point)
- Edges: bidding on the same tender
  - width=number of times companies co-bid

# Co-bidding patterns: benchmark

- 2007
- Dense networks
- Few cutpoints
- Cutpoints **don't benefit** from position

# Co-bidding patterns: suspicion

- 2009
- Dense networks
- Many cutpoints
- **Cutpoints seem to benefit from position**

# Further information about this approach
